Huron Education

Designing a Chart of Accounts that Meets Your Institution's Changing Needs

David Klipa Marnie Fulton J. Michael Gower

Introductions

Agenda

- Chart of Accounts Defined
- Why Redesign Your CoA?
- CoA Structures and Options
- Getting Started Establishing Guiding Principles
- CoA Design Approach and Key Considerations
- The CoA in the Institution's Fiscal Management Environment
- Q&A

Chart of Accounts - Defined

Polling Question

- What financial system is your institution currently using, transitioning to, or considering?
 - A. Oracle/PeopleSoft
 - B. Oracle EBS
 - C. Lawson
 - D. Banner
 - E. Kuali
 - F. Workday
 - G. Other

CoA

What it is – What it isn't

- The basic structure used to record the financial effects of transactions.
- The CoA is used to organize the finances of the institution and to segregate expenditures, revenue, assets and liabilities in order to provide an understanding of the financial status of the institution.
- CoA supports financial and management reporting and serves as the basis for the fiscal administration of the institution's funds, programs, projects, organizations, and activities.
- The CoA may not support the detailed fiscal tracking of all institutional activities, but serves as the common language for financial transactions whether they are created directly in the financial system or generated in another major financial system or through a localized third party application.

Why Redesign Your Chart of Accounts?

Why Redesign Your CoA?

- New financial system implementation
 - Pre-system selection
 - Early implementation
- Update to existing financial applications
 - Functional limitations of existing chart of accounts
 - Transitioned old CoA structure to new system
 - Reporting/fiscal management limitations
 - Upgrade/Reimplementation of financial application
 - Functional module/application additions

Polling Question

- Why are you interested in changing the Chart of Accounts?
 - A. Implementing a new financial system
 - B. Updating an older financial system
 - C. Adding modules to existing system
 - D. Looking to improve reporting
 - E. None of the above

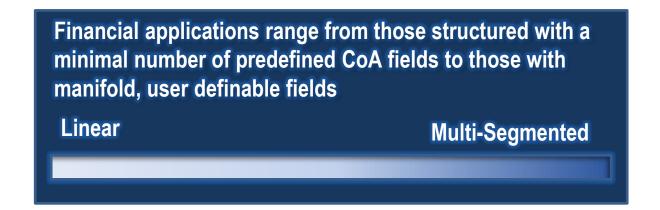

Chart of Accounts – Structures and Options

Chart of Accounts - Types

Not all CoAs are the same!

- The type of CoA that can be implemented at your institution is largely dependent on the financial system in place or planned.
- The CoA may fall anywhere in a range from a "linear" formation to a "multi-dimensional" structure.

CoA Options

Linear Structure

 A "linear" CoA uses a significantly limited number of fields and can be made up by as few as two fields - an "account" or "cost center" and an "object code".

> XXXXXXXXX-XXXX Account - Object

- The concepts employed with a linear chart of accounts are fairly simple. An account or cost center is established for every fund, project, program, organization, or activity that an institution needs to track.
- Linear CoA structures often appear in older, mainframe financial systems, and in a limited number of modern applications.

 A "multi-dimensional" chart of accounts is made up of multiple fields or segments, each typically recording a different element of information about a transaction.

- The use of a single account or cost center to record all financial activity associated with an activity or fund, is not a strict element of a multidimensional CoA. A transaction is defined by the combination of values recorded.
- Most modern financial/accounting systems provide for some level of multi-dimensional CoA with varying degrees of configurability or "customization".

CoA Options

Characteristics and Considerations

Linear	Multi-Dimensional
May require significant intelligence in numbering/nomenclature	 Increased flexibility for program fiscal management
 Simple concepts and easy to use from end user perspective 	 Improved capacity for tracking fiscal activity of cross disciplinary activities
 Limited capacity to track funds that cross organizations or purposes 	 High scalability, supporting accounting needs of complex organizations
 May rely on extensive use of "account attributes" to meet reporting needs 	 May require less maintenance than linear CoA
Limited capacity to track multidisciplinary activities and programs	 May be a significant departure from legacy CoA – steeper learning curve
 Minimal learning curve due to user familiarity 	 Requires care in design to result in best outcome

CoA Options

Linear to Multi-Dimensional Scale

Available financial applications may not be absolutely linear or multidimensional but rather may fall somewhere in between.

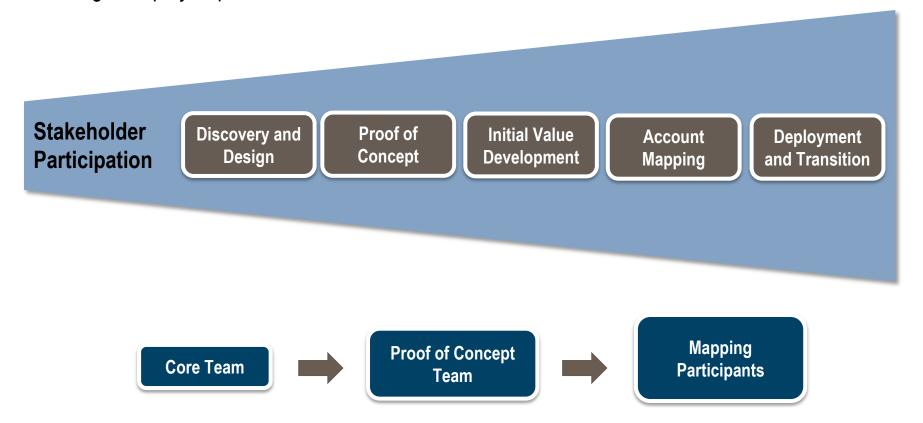

Getting Started – Establish a Team & Set Guiding Principles

CoA Design

Establishing a Team - Who should be involved?

Given the far reaching impact of the CoA and the intent that it serve as the basis for recording and managing virtually all fiscal activity at the Institution, it is vital that representation of the various organizations, programs and activities be included in the development process. This can be most effectively achieved by expanding participation as the CoA development progresses through the project phases.

CoA DesignProject Participants

CoA Design Participant Teams/Groups	Sample Team Members / Participants
 Core Team – small team made up of individuals with broad knowledge of Institutional fiscal management needs. Gathers and understands key financial management requirements Develops initial CoA structure, chart-field definitions and usage parameters Conducts initial validation of structure 	 Key Administrative areas: Finance and Treasury Controller's Office Administrative Services Auxiliary Service Budget and Planning Sponsored Projects
 Proof of Concept Team – Includes representation of financial administrators from key institutional functional areas (central administrative and academic). Develops scenarios for validating the CoA structure Participates in Proof of Concept sessions targeted at demonstrating use of redesigned CoA in meeting needs set forth in the test scenarios 	 Key Administrative and Academic areas: Undergraduate Schools and Departments Graduate Schools Centers and Programs Student Administration Facilities Management Auxiliaries (Housing, Dining, etc.) Human Resource Management
Mapping Participants – Broad participation of administrative and academic fiscal managers in mapping existing accounts to redesigned CoA.	Institution - wide central and academic organization fiscal administrators.

Guiding Principles

Setting Objectives

Establishing "Guiding Principles" early in the project provides a basis for decision making and will help define the parameters, design and future use of the Chart of Accounts.

Examples						
 The CoA should serve as the common language for all financial processes and systems 	 Each segment, field, or element of the CoA should be defined and serve a single purpose 					
 The CoA should accommodate growth and adapt to changing business needs 	 Segment use and hierarchies should be consistently designed to allow institutional reporting as well as flexibility at the local level 					
 Detailed data captured in subsidiary applications and programs should not be duplicated in the CoA 	The CoA should allow for like recording of financial transactions at the local level to support consistent financial reporting across the institution					

CoA Design – Approach and Key Considerations

Transition to a New CoA

A Multi-phased Approach

Redesigning a CoA is a multi-phased initiative that begins with developing an understanding of the institution's current and future financial and management reporting needs and ends with the translation and transition of existing accounts, processes and systems to a new structure.

- Discovery and Design
 - Information and requirements gathering
 - Prototype CoA design
- Proof of Concept
 - Validation of proposed CoA structure
- Initial Value Development
 - Finalization of value ranges and hierarchical structure
 - Development of initial values

- Account Mapping
 - Account by account translation to new CoA structure and values
- Deployment and Transition
 - Transition of transactional processes, systems and reporting

CoA Design

Discovery, Design, and Proof of Concept

This example follows a single sample requirement through the CoA design process.

28. Ability to track expenses for a single event across locations.

Determine Data
Elements

Requirement	Key Data Element 1	Key Data Element 2
28. Ability to track expenses for a single event across organizations.	Activity/ Event	Org

Create Prototype

	Account	Entity	Fund	Department	Function	Program	Project	Flex
	What?	Who?	How?	Who?	Why?	Why?	Why?	Why?
Required/ Conditional	Always Required	Always Required	Always Required	Always Required	Sometimes Required	Conditional	Conditional	Conditional
Institutional Use	Shared	Unique	Shared	Shared/ Unique	Shared	Unique / Shared	Unique / Shared	Unique

Perform Proof of Concept

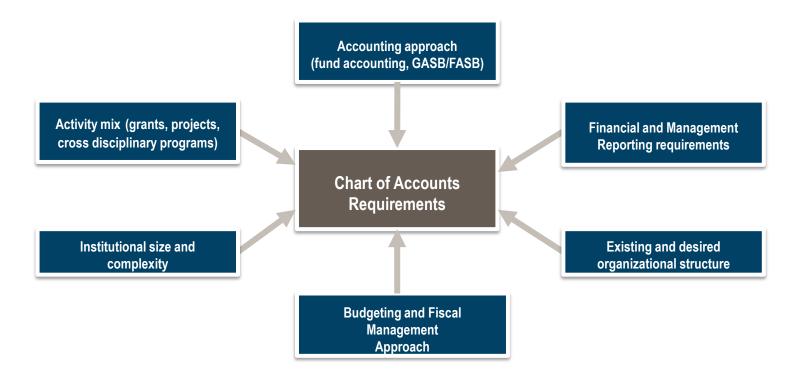

Account	Fund /	Org/Dept	Activity	Amount
Domestic Airfare	Unres Operating	Provost Ofc	Trustees Mtg	1,595.00
Rental - Facilities	Unres Operating	Facilities Mgmt	Trustees Mtg	2,033.00
Refreshments	Unres Operating	President's Ofc	Trustees Mtg	628.00

Gathering Requirements

How much is enough?

The basis for developing a sound CoA is to understand the fiscal management, accounting, financial reporting and management reporting requirements of the institution, as well as its component organizations and programs.

Requirements gathering does not need to be exhaustive. Common themes and needs will emerge that will allow the project to proceed to the development of a prototype in relatively short order.

Understanding the Requirements

The Who? What? When? and Where?

The purpose of the CoA is to provide answers to questions regarding each transaction entered into the financial system. The first step in moving from the CoA requirements to the development of a CoA structure, is to analyze each requirement and determine what it is asking about the transaction.

The CoA Should Provide Answers to These Questions

Who?

- Who is responsible for the transaction?
- Who is responsible for the activity?
- Who owns the asset/liability?
- Who is impacted by the transaction?

What?

• What is the nature of the transaction: revenue, expense, asset, or liability?

Where?

- Where is the activity being performed?
- What facility does the transaction impact?

How?

- How is the transaction being funded?
- How are net assets impacted by the transaction?
- How are unique funds impacted?

Why?

- Why has the transaction occurred?
- What institutional purpose does it serve?

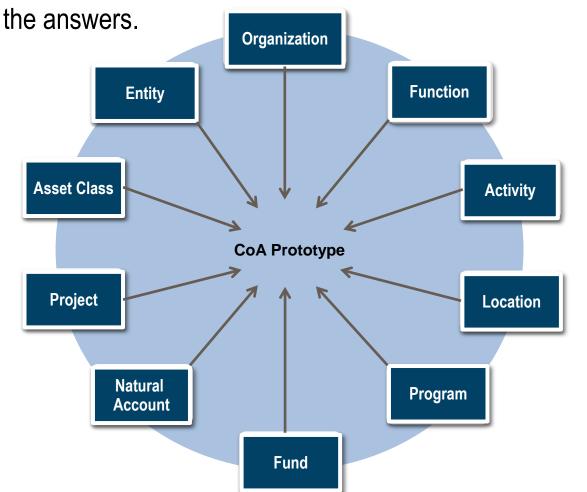

The answers to the right questions will provide the basis for summarizing transactional information to support financial reporting on funds, activities, programs, projects, organizations, etc.

Analyzing Requirements

Extracting the Key Data Elements

HuronEducation

Once the questions are understood you can determine the data elements or dimensions of information that need to be captured with each transaction to provide

Capturing the Data Elements in the CoA

Does your system allow for a multi-dimensional CoA?

Does it predefine available segments?

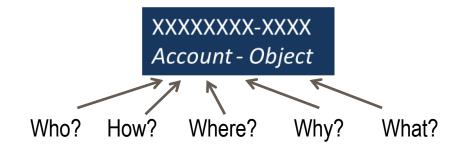

Does it place limitations on the number of segments or fields that can be configured?

Designing the Prototype

Capturing the Required Data Elements in the CoA Design

A linear structure requires that the data elements be captured in limited fields.

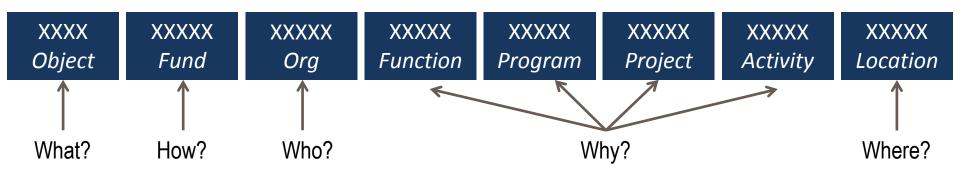

- Focus of design is less on number and purpose of segments and more on the way that values are established, numbered and ordered in the limited fields.
- Design and use of reporting attributes may carry greater importance.
- May require:
 - Development of more "intelligent numbering"
 - Design and assignment of attributes
 - Development of alternate reporting hierarchies
 - Tagging additional information with each transaction

Designing the Prototype

Multi-Dimensional CoA

Capturing the Required Data Elements in the CoA Design

A multi-dimensional structure allows the desired data elements to be captured in unique fields.

- Focus of design lies in determining the number of fields to be used and the purpose of each field
- Best reporting/fiscal management capacity is obtained when a sufficient number of fields are established to ensure that one field is not used for more than one purpose.
- Considerations
 - Meaning is brought to a transaction through the <u>combination</u> of field values multiple elements of information should not be captured in a single field.
 - Important to strike a balance between confirming the uniqueness of each field while managing the number of segments.

Will This Work For Us?

The objective of the Proof of Concept exercise is to confirm that the prototype CoA structure will meet the needs of the institution. It is focused on the development of test scenarios based on the requirements gathered in the Discovery and Design Phase.

- What it is/What it isn't:
 - Based on "real life examples"
 - Draws examples from multiple organizations and reaches a broader base of participants in CoA design
 - May result in adjustment to the prototype CoA structure
 - Targets proving the requirement
 - Is not exhaustive, end to end testing of the CoA or system.
 - Often is not executed in the actual financial application maybe an MS Excel based exercise
 - May not be focused on demonstrating every "debit and credit" transaction in a scenario

An Example

- Requirement The CoA should provide the capacity to account for and report on an institution-wide activity that crosses organizations, funds, and programs.
- Example Proof of Concept scenario University X wants to track all revenues and expenses associated with Graduation.
 - The President's Office incurs expenses associated with speaker fees and venue rental using unrestricted funds and a gift restricted specifically for commencement.
 - The Provost's Office incurs expenses for a dinner honoring doctoral candidates using a restricted gift and unrestricted funds.
 - The Dean of Arts and Sciences incurs expenses for the A&S College
 Commencement expenses include speaker fees, venue rental, and refreshments
 gift and unrestricted funds are used.
 - The Biology Department within A&S, sponsors a dinner honoring its Masters Candidates.
 - The School of Allied Health incurs venue rental expenses in connection with an event honoring its BSN Program graduates.

HuronEducation

Linear CoA

Demonstrates the need for account creation and use of reporting/account attributes.

Account	Account Description	Account Attributes	Object	Amount
21014221	Pres Office - Graduation	Purpose: Graduation Org: Pres Ofc Fund: Unrestricted	Facilities Rental	4,000.00
31016258	Res Gift-Smith Cmmnc Spkr - Grad	Purpose: Graduation Org: Pres Ofc Fund: ResExpnd	Speaker Fees	10,000.00
23015380	Provost - Graduation	Purpose: Graduation Org: Provost Ofc Fund: Unrestricted	Meals -Official Business	2,500.00
33014672	Res Gift-Jones -Doc Honors - Grad	Purpose: Graduation Org: Provost Ofc Fund: ResExpnd	Meals -Official Business	2,500.00
24015831	A&S Dean -Graduation	Purpose: Graduation Org: A&S Dean Fund: Unrestricted	Speaker Fees	6,000.00
34012291	Res Gift - A&S Operations	Purpose: Graduation Org: A&S Dean Fund: ResExpnd	Refreshments	1,500.00
24015831	A&S Dean -Graduation	Purpose: Graduation Org: A&S Dean Fund: Unrestricted	Facilities Rental	2,200.00
24306221	Biology-Master's - Graduation	Purpose: Graduation Org: Biology Fund: Unrestricted Program: Bio Masters	Meals -Official Business	400.00
25157321	Allied Health - BSN - Graduation	Purpose: Graduation Org: Allied Health Fund: Unrestricted Program: BSN	Facilities Rental	3,000.00

Multi-Dimensional CoA

Demonstrates the combination of values that exist in the multiple account segments to capture requisite financial data.

Amount	Object	Fund	Org	Function	Program	Project	Activity	Location
		Unrestricted -	Office of the					
4,000.00	Facilities Rental	Operating	President	Student Svcs			Graduation	
		ResGift-Smith	Office of the					
10,000.00	Speaker Fees	Cmncmnt - Spkr	President	Student Svcs			Graduation	
	Meals -Official	Unrestricted -						
2,500.00	Business	Operating	Provost's Office	Student Svcs			Graduation	
	Meals -Official	ResGift-Jones						
2,500.00	Business	Doctoral Honors	Provost's Office	Student Svcs			Graduation	
		Unrestricted -	Arts and					
6,000.00	Speaker Fees	Operating	Sciences Dean	Student Svcs			Graduation	
		ResGift - A&S	Arts and					
1,500.00	Refreshments	Operations	Sciences Dean	Student Svcs			Graduation	
		Unrestricted -	Arts and					
2,200.00	Facilities Rental	Operating	Sciences Dean	Student Svcs			Graduation	
	Meals -Official	Unrestricted -			Masters			
400.00	Business	Operating	Biology	Student Svcs	Program		Graduation	
		Unrestricted -						
3,000.00	Facilities Rental	Operating	Allied Health	Student Svcs	BSN Program		Graduation	

Value Development

HuronEducation

Key Considerations

- Activities
 - Develop field hierarchies
 - Develop value ranges
- Considerations
 - Adhere to Guiding Principles
 - Leverage Proof of Concept exercises for establishing hierarchies and ranges
 - Development of values in certain fields may be limited until mapping occurs
 - Limit extent to which like information is captured in multiple fields

Mapping

HuronEducation

An Institution Wide Initiative

Activities

- Account-by-account translation from existing CoA to redesigned CoA
- Develop cross-walk to support conversion, and certain interfaces
- Complete value development

Considerations

- Involve "owners" of the accounts/fiscal managers
- Clean up existing balances, old/unused accounts

Deployment

Making the Transition

Activities

- Finalization of crosswalk/mapping document
- Conversion of data from existing structure to redesigned CoA
- Implementation of redesigned CoA in feeder systems and employment of translation tables
- Development of CoA user guidance
- Conduct user training

Considerations

- Ensure support and assistance approach in place
- Periodic refresher training

Other Considerations: The New CoA in the Institution's Environment

Revised CoA and Existing Technology

CoA Impact On Other Applications

Often the revision to the institution's CoA requires modification to the accounting structure within interfacing applications

Common Interfacing Applications/Systems						
Advancement (Donor Fund Management)	Cash Management	Payroll	Procurement/Purchasing			
Budgeting	Effort Reporting	Indirect Cost Recovery Rate System	Student Administration / Student Accounting			
Capital Asset Management	Grants Management	Facilities and Physical Plant Management	Specialized Service Applications			
Capital Projects Costing	Human Resources/Human Capital Management	Travel and Expense Reporting	Point of Sale Applications			

A Word About Managing Change in Higher Education

Achieving an envisioned state requires consistent emphasis on communication and change management

Ownership is defined as demonstrated commitment to the change Change management initiative. Individuals feel responsible and accountable for its begins with the first **Ownership** success. The goals and objectives are clear, specific, and discussion realistic. (depth of information, interactivity, etc.) Buy-in is defined as agreement with the concepts and ideas presented and verbally Complexity of Delivery **Buy-in** expressing support. Obtaining buy-in requires broad engagement with leaders and stakeholders in academic, research, healthcare and administrative areas. Understanding is defined as internalizing new ideas and ways, and grasping the Understanding implications of the changes indicated. Ensure consideration of alternatives and allow adequate time for deliberation and feedback at every key decision point. Awareness is defined as becoming cognizant of and developing a sense of appreciation for the Awareness change. Understand and use facts and data to develop a shared understanding of the current state to serve as a platform for change. Time

The case for change and implementation begins with the first interview.

Lessons Learned

Key Considerations:

- Don't rely too heavily on the current CoA and reports to determine requirements for the new CoA consider the institution's reporting and fiscal management objectives.
- The Chart of Accounts serves as the primary financial reporting tool across all
 institutional funds, programs, activities be sure to understand and incorporate the
 needs at the local level.
- Exhaustive requirements gathering is likely not necessary. Understand needs to a
 sufficient level to support development of a CoA prototype. The Proof of Concept,
 value development and mapping exercises will provide additional opportunity to
 assess needs.
- Be sure to understand the functionality delivered in subsidiary systems and ledgers –
 It's typically not necessary to duplicate detail in the CoA.
- Don't underestimate the change management effort.
