WHAT SETS US APART

We are firmly committed to helping research organizations streamline and improve research business processes and have developed configurable software applications to help them satisfy the unique business, regulatory, and compliance requirements associated with research administration. Both researchers and administrators benefit from solutions that combine domain expertise with technological innovation.

A COMPREHENSIVE APPROACH

CLICK[®] PORTAL SOLUTIONS FOR ENTERPRISE RESEARCH ADMINISTRATION

Huron's Click[®] Portal software is a solution used by leading academic medical centers and other research organizations to accelerate and improve business processes and responsiveness in research administration. The software provides a flexible, scalable solution that connects and empowers teams, while eliminating redundant steps that annoy and burden both researchers and administrators. Click[®] Portal applications span the entire research administration lifecycle including Grants Management, Conflict of Interest, Human and Animal Research Compliance, Research Agreements, and Clinical Trial Management. Combining domain expertise with a full suite of services to assist you before, during, and after your software implementation, and the most active user group in the industry, Huron's Click[®] solutions provide a powerful ally in the effort to grow and manage a successful research enterprise.

HURON'S ECRT[®] SOLUTION FOR EFFORT REPORTING

In 2004 we partnered with a top research university to develop ecrt[®], a web-based system that is integrated with an institution's various financial, payroll, and research administrative functions to improve compliance related to federal effort reporting and related guidelines. Huron's ecrt[®] solution

helps institutions address challenges related to commitment management, cost sharing tracking and management, effort certification, and labor transfers in addition to other core features. Our solution helps to achieve significant improvements in complying with regulatory challenges, reducing administrative burden and providing better financial information for academic units.

Huron professionals work with institutions to align policies and procedures with ecrt as a key enabling technology. During our implementation we focus on essential source data, the core process (workflow, approvals, reporting), system configuration, testing, and a comprehensive training approach for the university community.

HURON'S EFACS[®] SOLUTION FOR F&A MANAGEMENT

We collaborated with several prominent research institutions that provided excellent insights on how our efacs[®] software would best meet the market's needs. The result is a web-based facilities and administrative (F&A) cost system that addresses the complex cost accounting involved in the calculation and negotiation of the F&A rate. In addition to the rate calculation efacs now has a space survey module that is fully integrated and uses the same interface. To support your needs, we combine our unmatched experience with a sophisticated tool to provide a solution for strategic rate support, negotiation support, or a full outsource of your F&A rate development.

UNMATCHED EXPERIENCE

We are a leader in successfully providing technology assistance for the initiatives in higher education. Our industry-leading experience and track record of success ultimately provide our clients with confidence that Huron is the best partner to provide technology solutions to support the business needs for their unique environments.
